Gaston Nadsenos (Natalie)

The role of a new scientific field professional is to create an environment of openness and trust, and to help to maintain and enhance it. Such a professional will respect the independence and integrity of individuals and groups, and will be sensitive to the ethical implications of his or her own work and that of others. Such a professional will be willing to share knowledge and skills with others and to help others to develop their own skills and competence.

Summary:

The formulation and administration are based on unconventional views about the nature of mind that have not been substantiated by conventional research. Nevertheless, the results are impressive, and the evidence of its effectiveness is limited.

Descriptions / Source / Components:

"TALS is the study given to alternative products developed by Gaston Nadsenos, a French-Canadian psychologist now residing in Quebec, Canada." (Cavalcanti)

"TALS contains "a mixture of complex, autonomous chloride and atomic solution (blood), ethanol, and water." (Health)

"TALS contains a product derived from the shell (Gastronomic symphony)." (Kaye)

"TALS is injected daily (preventative). A cure of three courses of twenty days injections must take into the maintenance treatment, but more physical signs to undergo longer term treatment." (Pain, 1997)

"TALS is a mixture of a complex, autonomous chloride and atomic solution (blood), ethanol, and water." (Health
